## **AIRFIELD EQUIPMENT & LIGHTING**

### **PRODUCTS BY MCWILLIAM TECHNOLOGY**

#### **McWILLIAM INTERNALLY LIT WINDSOCK.**

This is for the budget-conscious operator. The windsock is supported on a painted steel swivelling frame which carries the internal lighting system and slip ring. The part of the windsock on the frame is always horizontal and fully illuminated. The tail of the windsock droops as the wind speed drops and the light hitting that part at night reduces.

There is no separate obstruction light, the highest part of the unit being the orange windsock, illuminated at night.

[See current price list]

A winch up/down version can be manufactured to order.

Internally lit, non-tilting head

Lit at night

Externally illuminated and non-illuminated wind sock masts to UK CAA CAP168 Chap 7 remain available.

All McWilliam Technology wind socks & masts are available from AirfieldUK Ltd.

*AirfieldUK Ltd supplies of all kinds of aerodrome equipment.*
